                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   intron
requests: clonerequest@sanger.ac.uk
On May 8, 2001 this sequence versicn replaced gi:13274222.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >-
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 CTGAGCGAGTTCTACATCCTAACGGCAGCCCACTGTCTCT 100

```
IMPORFANT: This sequence is not the entire insert of clone RP11-98F14 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP11-98F14 is at 1 in this sequence true left end of clone RP11-39JH12 is at 132834 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.sanger.ac.uk/HGP/Chr13
RP11-98F14 is from the library RPCI-11.1 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group.                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   length: 20000000000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IDENTITY_NUC Gapop 10.0 , Gapext 1.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of an SNP, for example nucleotide may be C or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in genes. These SNPs can be used in disease diagnosis and prediction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Fig 5; 214pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose susceptibility to diseases of the cardiovascular, endocrine and neurological s, stems, such as coronary artery disease, schizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The degenerate codon within the sequence represents the position of an SNP, for example the letter S represents a polymorphism where the nucleotide may be C or G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric serine protease FXT

This invention describes a novel chimeric serine protease compound which has antithrombotic activity and comprises two domains with a beta-sheet structure. The first domain corresponds to the first domain of a first serine protease and the second domain corresponds to the second domain of a second serine protease. The products of the invention can be used for identifying antithrombotic agents by determining whether an agent modulates the activity of the serine protease. They can also be used to

identify agents through rational drug

design using information based on

Chimeric

domains, useful

serine protease comprising Factor X and Trypsin useful for identifying thrombolytic agents

The present sequence encodes a coagulation factor. The specification describes tissue factor binding ligands which comprise a binding region which binds to vasculature, particularly of tumours, and a tissue factor construct. The binding ligands can be used for stimulating coagulation in disease-associated vasculature, particularly for the treatment of tumours. The products can also be used for treating e.g. benign prostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  07-JUN-1995;

New immunological and growth factor-based bispecific binding ligands, useful for stimulating coagulation in vasculature-associated diseases e.g. for treating both benign and malignant diseases (e.g. meningioma or hemangioma)

Example 9; Column 129-130; 83pp; English.

The present invention relates to a binding ligand with a first binding region that is operatively linked to either a coagulation factor or a second binding region that binds to a coagulation factor. The first binding region binds to a component on the surface of a tumour. The second binding region is all or part of an antibody. An example of a coagulation factor for use in the invention is human truncated tissue factor. Truncated tissue factor (tTF) is the extracellular domain of the protein (see AAB15019). The binding ligand of the

                              The invention relates to the induction of blood coagulation specifically within tumour vasculature. This is achieved by the use of a bispecific molecule, which comprises a region capable of binding to intratumoral vascular or stromal cells linked to a coagulation factor or to a region capable of binding to a coagulation factor. An example of such a region capable of binding to a coagulation factor. An example of such a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-MAR-1992;

                                                                                                                                                                                                                                                                                                 Kit for inducing coagulation in tumor vasculature, useful for treating malignant or benign growths, contains ligand, linked to coagulation agent, that targets tumor marker \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Truncated tissue factor; tTF; human; blood coagulation; tumour vasculature; bispecific antibody; targetting; cancer; vascularised tumour; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention is useful for stimulating coagulation in vasculature associated diseases. Particularly, the binding ligand is useful for treating both benign and malignant diseases that have a vascular component. These diseases include benign growths (e.g. pBH), diabetic retinopathy, arteriovenous malformations, meningioma, hemangioma, neovascular glaucoma, psoriasis, synovitis, endometriosis, hemophylic joints, hypertrophic scars or vascular adhesions. The present binding ligands offer the advantage that even limited damage to the tumour vasculature could produce an avalanche of tumour cell death because each capillary provides oxygen and nutrients for thousands of tumour cells. The present sequence is DNA encoding coagulation factor X/Xa. This factor was used in the invention.
          bispecific molecule is a bispecific
                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-269871/23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc tumour antigen, and the other arm binds a coagulation factor. The cc expression of certain proteins (tumour antigens) is upregulated in tumour vasculature; such proteins include vascular endothelial growth cc factor (VEGF) and members of the fibroblast growth factor (FGF) family. Cc An antibody or antibody fragment against VEGF or basic FGF (bFGF) may be incorporated into the bispecific molecule in order to target coagulation to tumour vasculature. The coagulation factor-binding portion of the Cc Alfald88) which lacks the cytoplasmic and transmembrane domains. Cc Although tTF can associate with Factor VIIa, the tTF/Factor VIIa complex cannot alone initiate the coagulation cascade as the complex has to be associated with a phospholipid surface for coagulation to occur. Cc However, binding of tTF to tumour vasculature via a tumour antigen/tTF complexed to the initiation of coagulation. Kits for the induction of tumour vasculature via a tumour antigen/tTF complexed to benign diseases associated with a vasculation may be used to treat malignant componiant to be a complex benign growths, prostatic hypertrophy, restenosis, psoriasis, glaucoma, rheumatoid arthritis. Coagulation is induced coagulation to be effective against many different types of cancer. Cc sequences AAA1291-31-AAA12952, AAA12954-A12933 and AAA1297-A12972 cc represent pCR primers used in exemplifications of the present invention to generate constructs encoding tTF, tTF variants or tTF dimers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ۲,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Combinding region is linked to a coagulating agent which is a coagulation component (e.g. tissue factor). The second binding region comprises an coagulation component (e.g. tissue factor). The second binding region comprises an coagulation of an antibody. The method is used for delivering an exogenous or an endogenous coagulation factor to tumour-associated vasculature which is being or malignant. The method can be used to treat cancer by promoting specific blood coagulation in the vasculature of the tumour relative to the vasculature in nontumour coagulation in the vasculature of the tumour sare usually solid tumours, particularly components. The ligands are suitable to treat being and malignant components. The ligands can selected the vasculation of the vascular component to provide oxygen and components. The ligands can be designed this pending prostatic hyperplasia, diabetic retinopathy, vascular restenosis, reteriovenous components in the ligands can also be used in standard bink and assays in component diseases and disease-associated agents such as activated platelets. Certain disease-associated agents such as cartivated platelets. Certain disease-associated agents are similar in the ligands can be designed which are capable of binding to different diseases and different tumours, making it possible to treat numerous diseases and different types of cancer with one pharmaceutical, therefore an agent does not need to be tailored to each individual
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

This coagulation factor can be used in the formation of coagulation factor with the formation of coagulagands. Mutated versions of this sequence can be used in the method for delivering a coagulant to a tumour-associated vasculature using bispecific binding ligands which promote blood coagulation. The binding ligand consists of a binding region that binds to a surface-expressed, surface accessible or surface-localised component of tumour cell, intratumoural vasculature or tumour associated strong. The binding region that the component of tumour cells intratumoural vasculature or tumour associated strong. The

Such proteins are used to identify activators/inhibitors of factor IX family proteins (potentially useful as regulators of coagulation, fibrinolysis and homeostasis). The protein in zymogen form is also useful in assays for detecting factor IXa activity in aqueous solution (specifically in body fluids). The protein can be used to produce co-crystals with protease variants or inhibitors for X-ray structural analysis and drug modelling and as restriction proteases in biotechnology. These truncated proteins have the same specificity as factor IX family proteases and can be produced in prokaryotes in a form that allows production of active enzymby conversion to native form and enzymatic cleavage.

                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    such as in the food processing industry, e.g. glucoamylases and glucose, isomerases are used for converting starch to high fructose corn syrup, proteinases for the hydrolysis of high molecular weight proteins and in manufacturing leather or alcoholic beverages, pectinesterases for pectin hydrolysis in food industry, lipases for cleaving ester linkage in triglycerides, and for effluent treatment. The recombinant proteins may further be used to produce protein antibiotics, which can be used in healing processes, and to produce animal feed enzymes. The present sequence encodes a fusion protein of the invention, and comprises a fusion of a cell signal peptide, Sig (not specified), CBD cex, and an endoplasmic reticulum retaining peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Expressing and isolating recombinant protein in a plant, useful for producing large quantities of recombinant proteins, by expressing fusion protein including a cellulose binding peptide fused to a recombinant protein .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fusion protein including the recombinant protein and a cellulose binding peptide fused to it, where the fusion protein is compartmentalised and sequestered within plant cells, plant derived tissue or cultured plant cells. The method is useful for obtaining large quantities of the recombinant proteins and protein products in a simple and cost-effective manner. Recombinant proteins may be used commercially, and be a sixth food according to detail to the food according to the combinant proteins and cost-effective manner.

```
a recombinant protein in a plant. The method comprising expressing a fusion protein including the recombinant protein and a cellulose binding peptide fused to it, where the fusion protein is compartmentalised and sequestered within plant cells, plant derived tissue or cultured plant cells. The method is useful for obtaining large quantities of the recombinant proteins and protein products in a simple and cost-effective manner. Recombinant proteins may be used commercially, such as in the food processing industry, e.g. glucoamylases and glucose isomerases are used for converting starch to high fructose corn syrup, proteinases for the hydrolysis of high molecular weight proteins and in manufacturing leather or alcoholic beverages, pectinesterases for pectin hydrolysis in food industry, lipases for cleaving ester linkage in triglycerides, and for effluent treatment. The recombinant proteins may further be used to produce protein antibiotics, which can be used in healing processes, and to produce antimal feed enzymes. The present sequence encodes a fusion protein of the invention, and comprises a fusion of a cell signal peptide, Sig (not specified), CBD-Tma, and an endoplasmic reticulum retaining peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Expressing and isolating recombinant protein in a plant, useful for producing large quantities of recombinant proteins, by expressing a fusion protein including a cellulose binding peptide fused to a

                                                                                      Ş
                                                                                                                                                                                                                     method resulting in the production of novel human Factor X (F10)

Canalogues. Such analogues have in the region of the natural F10a

cactivation cleavage site, a modification that creates a processing site

Caron be used to generate, in vivo or in vitro, F10a analogues that

can be used to control bleeding and for treating defects of factors IX.

CVI or VIII, e.g. in hamophiliacs who have developed antibodies to

cactivation is ame conditions. The analogues have high stability and can

be activated without use of animal enzymes such as trypsin. Only

activated without use of animal enzymes such as trypsin. Only

cactivation is affected, their activity is the same as the natural factor.

The analogues can be isolated as a pure single-chain pro-protein (not

cusually possible because of rapid processing of the native precursor) and

this converted to two-chain form by subsequent activation. Activated

canalogues have good stability and structural integrity and are

practically free of inactive intermediates and autoproteolytic
                                                                                                                       Matches

                                This sequence encodes the human Factor X protein which is used in a CC method resulting in the production of novel human Factor X (F10) CC analogues. Such analogues have in the region of the natural F10a CC activation cleavage site, a modification that creates a processing site for a protease that does not naturally cleave F10 in this region. The CC proteins are used to generate, in vivo or in vitro, F10a analogues that CC can be used to control bleeding and for treating defects of factors IX, CC vII or vIII, e.g. in haemophiliacs who have developed antibodies to CC factors VIII and/or IX. The encoding nucleic acid can be used in gene CC therapy of the same conditions. The analogues have high stability and can be activated without use of animal enzymes such as trypsin. Only CC The analogues can be isolated as a pure single-chain pro-protein (not usually possible because of rapid processing of the native precursor) and this converted to two-chain form by subsequent activation. Activated analogues have good stability and structural integrity and are practically free of inactive intermediates and autoproteolytic
                                                                                                                                                                                                                                                                                                                                                                                          New factor 10 deletion mutants lacking the natural protease processing site - but having a non-natural site inserted, and related DNA, particularly for in vitro activation to products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Factor

                                                                                                                                                                                                                                                       The present invention describes a factor X analogue (I) which contains a modification between Glu226 and Ile235, relative to the 488 residue amino acid sequence given in AAB70411. (I) has haemostatic activity and can be used in gene therapy. (I) encoding pol)...cleotide (II) can be used to produce a drug, which is useful for treatment of patients with blood coagulation disorders, such as patients suffering from haemophiliae, or haemophiliaes with inhibitory antibodies. Preparations containing a polypeptide with factor X/Xa activity are more readily activated by factor Xla or its derivative, which has high stability, without having to use one of the proteases used in prior art to activate the natural factor X, particularly one of animal origins, such as Russell's viper venom (RVV) or trypsin. The present sequence encodes human factor X, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel factor X analog useful for producing drug which is useful for treatment of blood coagulation disorders, such as hemophilia, contains modification between amino acids Glu226 and Ile235 -

```
C aspartic acid in the first epidermal growth factor (EGF) domain to C Beta-hydroxyaspartic acid; addition of N- and O-linked C oligosaccharides to the activation peptide; removal of an internal C tripeptide to yield two-chain factor X and removal of the C propeptide just prior to secretion. While some of these modifications CC do not appear essential for factor X function the removal of the C signal sequence, propeptide, internal tripeptide and full C gamma-carboxylation are all steps which are important requisites for CC polyucleotides are described which encode a propeptide fused to a nucleic acid sequence encoding a vitamin K-dependent protein (VKDP). CC The fusion proteins encoded are vitamin K-dependent protein (VKDP). CC gamma-carboxylation of a VKDP to produce a fully gamma-carboxylated C useful for alleviating a VKDP associated disease. The fusion C constructs result in the production of fully gamma-carboxylated C mature VKDPs, which are biologically active. The fusion constructs result in the production of fully gamma-carboxylated C mature VKDPs, which are biologically active. The fusion constructs result in the production of fully gamma-carboxylated C mature VKDPs, which are biologically active. The invention C constructs result in the production of fully gamma-carboxylated C mature protein sequence of human Factor X.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                    CC AAH57161 to AAH57576 represent cell and tissue specific polynucleotide' CC sequences (I). (I) can have cytostatic, immunomodulatory and concerning concerning (II) encoded by then are used in gene therapy. (I) and proteins (II) encoded by then are used in high throughput screening commentics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and CC pharmaceutical agents. Expression of (I) in a sample indicates the CC differentiation of embryonic stem cells into a tissue selected from CC tissues. (I) and (II) are used to produce an expression profile that CC disease or disorder. The gene profile can be used for diagnosis, cc prognosis or monitoring of treatments and for investigating a CC predisposition to a disorder where the gene is associated with a CC cancer, immunopathology or neuropathology.
                                                                                                                                   Query Match
